The Biggest **Fire Resistant Door** in Malaysia

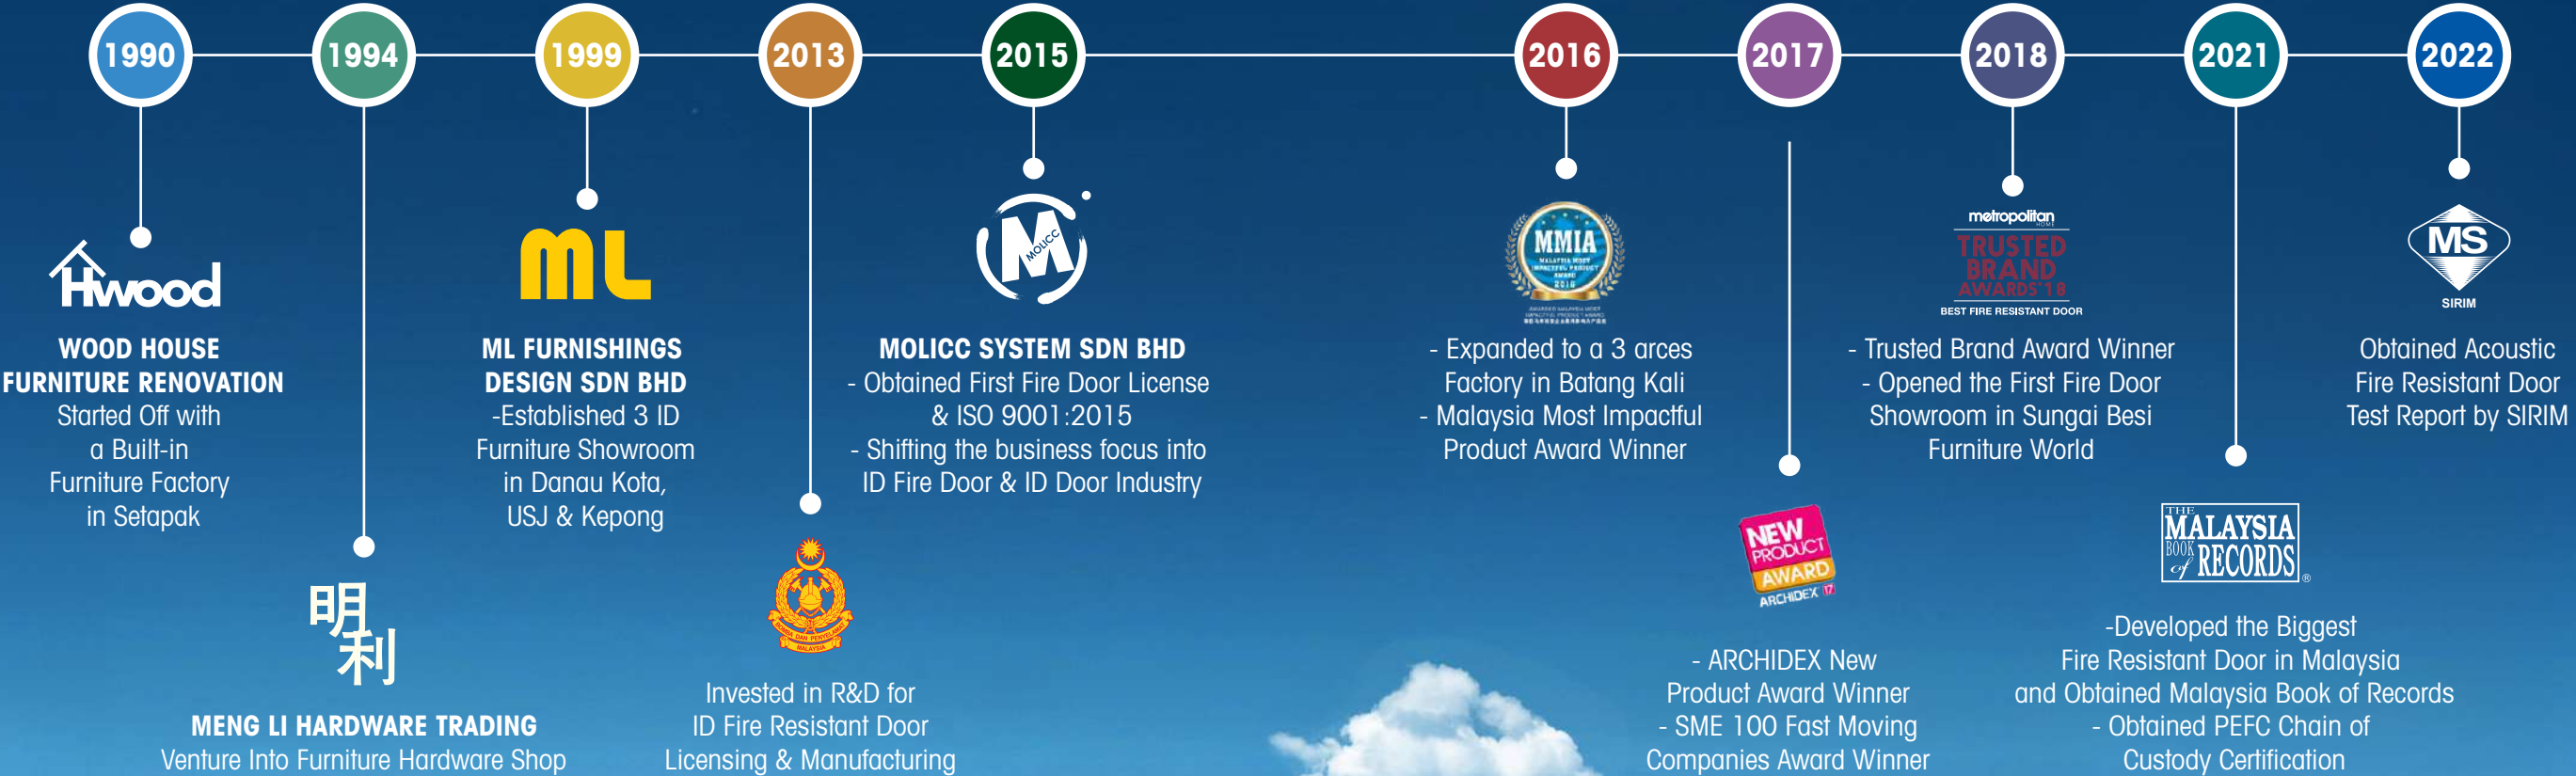

Molicc System Sdn Bhd is a well-established wood-based manufacturing company that has been in operation since 1990. Our core expertise lies in the production of high-quality built-in furniture, interior doors, timber door frames, and architraves, catering to a wide range of domestic projects including residential, commercial, and industrial developments. Our new journey began in 2013 with a strong commitment to fire-resistant doors, driven by the recognition of their paramount importance in saving lives. Leveraging our extensive experience and craftsmanship in timber works and doors, we have developed a range of meticulously tested and approved fire-resistant doorsets that adhere to the stringent MS 1073: PART 3: 1996 (AMD.1:2003) building compliance standards.

As pioneers in the industry, Molicc is proud to be the first door supplier and manufacturing company in Malaysia to receive licenses from the Fire and Rescue Department of Malaysia and the Scientific and Industrial Research Institute of Malaysia (SIRIM) to fabricate High Pressure Laminates (HPL) fire-resistant doors. Over the past decade, we have continued to innovate, introducing a diverse range of new fire-rated doors such as the largest fire door in Malaysia, acoustic fire-rated doors, fire doors with louvers, automatic swing operators, concealed hinges, and more.

At Molicc System, we place a strong emphasis on door functionality and design elements, complemented by a touch of modernity in our door manufacturing process. We believe that a door is more than just an entryway—it embodies the essence of your home and lifestyle, serving as a protective barrier while preserving the aesthetics of your space. Our commitment to safety, durability, functionality, and aesthetics is reflected in every door we create, ensuring that your home remains secure and beautiful.

COMMITMENT TO QUALITY

SIRIM

SIRIM provides certification services for fire doors, ensuring that they meet specific safety and performance criteria. Certification from SIRIM indicates that a fire door has undergone rigorous testing and evaluation, reassuring consumers and building owners of its reliability and effectiveness in containing fires.

Quality Management System
ISO 9001:2015

ISO 9001 certification provides assurance to customers, regulatory authorities, and stakeholders that fire door manufacturers adhere to rigorous quality management standards. It enhances confidence in the reliability, performance, and safety of fire doors, making ISO 9001 certification a valuable credential in the fire safety industry.

PEFC

The Programme for the Endorsement of Forest Certification (PEFC) is an international non-profit organization devoted to promoting sustainable forest management. The PEFC certification verifies that wood and wood-based products used by MOLICC originate from sustainably managed forests, promoting responsible sourcing and consumer confidence in forest products. The organization’s efforts aim to strike a balance between environmental conservation and the socio-economic benefits derived from forests.

BOMBA

Fire doors in Malaysia are guided by BOMBA (Fire and Rescue Department of Malaysia) due to its authority and expertise in fire safety. BOMBA sets standards, enforces regulations, conducts inspections, and raises public awareness about the importance of fire doors in mitigating fire risks and ensuring building safety. Compliance with BOMBA’s guidelines is essential for legal adherence and public safety.

Malaysia Book of Records

Establishing a record for “The Biggest Fire Rated Door” in the Malaysia Book of Records would not only celebrate the achievements of the individuals or organizations involved but also raise awareness about the importance of fire safety and the significant role played by fire-rated doors in protecting lives and property. It would serve as a testament to Malaysia’s commitment to advancing fire safety standards and fostering innovation in the field of fire protection.

CIDB

MOLICC as a CIDB Grade 6 companies are respected players in the construction industry, known for their financial stability, technical prowess, and experience. Specializing in large-sized projects, they deliver quality results with efficiency and reliability. With a focus on client satisfaction and project success, CIDB Grade 6 companies are trusted partners for diverse construction endeavours.

AWARDS

ARCHIDEX Star Award

The ARCHIDEX Star Award is a prestigious accolade in the field of architecture and design. It recognizes outstanding achievements and innovations in various aspects of the industry, including architectural design, interior design, product design, and sustainable development. MOLICC as the recipient of the ARCHIDEX New Product Award for its innovative product, the HPL ID Fire Rated Door, represent the pinnacle of talent and innovation within the industry, setting benchmarks for excellence and inspiring future generations of architects and designers.

SME 100 Fast Moving Companies
Award

The “SME 100 Fast Moving Companies” designation is awarded to small and medium-sized enterprises (SMEs) that demonstrate exceptional growth, agility, and performance in their respective industries. This recognition acknowledges MOLICC that have exhibited rapid expansion, innovation, and adaptability, positioning them as leaders in their market segments. Being recognized as an SME 100 Fast Moving Company highlights a company’s ability to thrive in competitive environments, drive economic growth, and contribute significantly to the business landscape.

Malaysia Most
Impactful Product Award

This award recognizes products in Malaysia that have made a significant impact on the market, economy, or society. This prestigious award highlights products that have demonstrated innovation, creativity, and effectiveness in meeting consumer needs or addressing societal challenges. Winning this award signifies recognition for outstanding achievement and contributions to the Malaysian marketplace and beyond.

Metropolitan Home Trusted Brand
Award

The “Metropolitan Home Trusted Brand Awards” recognize MOLICC as the Best Fire Resistant Door that have earned significant trust and confidence among consumers in urban areas. These awards highlight brands that excel in providing quality products or services and maintaining strong relationships with customers within metropolitan settings. The recognition showcase brands that have demonstrated excellence, reliability, and customer satisfaction, contributing to their esteemed reputation in urban markets.

ONE HOUR FIRE RATED DOOR

Introducing the MOLICC 1 Hour Fire-Rated Door, the ultimate safety and protection solution.

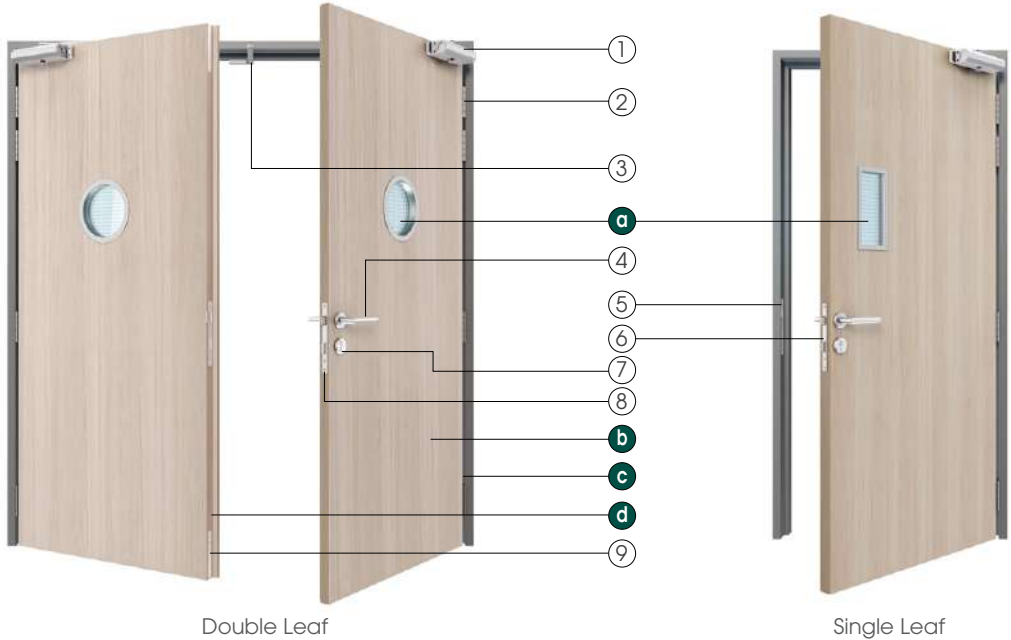

Engineered with state-of-the-art fire-resistant technology, this door is built to endure extreme heat and flames for a full hour. Its robust construction and strict adherence to industry standards guarantee peace of mind and a dependable defence against fire emergencies.

With a range of finishes and customization options available, you can seamlessly incorporate this door into your space, both enhancing safety and maintaining your unique design aesthetic. Make the smart choice for safety – choose the MOLICC 1 Hour Fire-Rated Door.

ONE HOUR FIRE RATED DOOR - 3 METER

An Oversized Fire Door is a remarkable and crucial addition to spaces where both expansive dimensions and exceptional fire safety are required. These doors are meticulously designed and constructed to provide the same level of fire resistance and protection as standard-sized fire doors but on a larger scale.

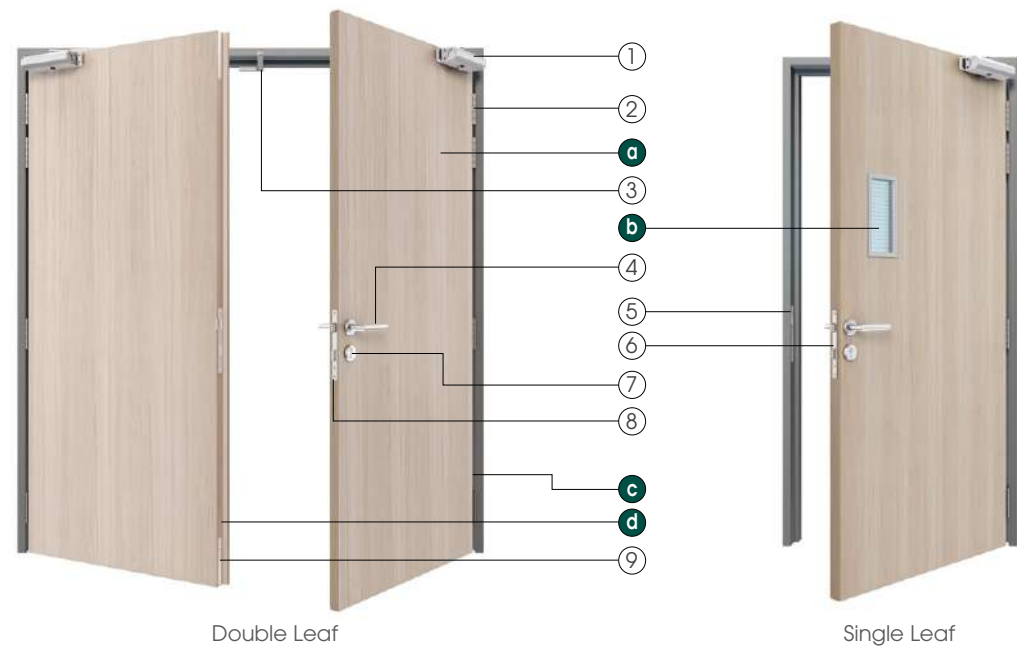

With their generous dimensions, Oversized Fire Doors are ideal for buildings with wide openings, such as industrial facilities, banquet hall, data centres, and commercial spaces. They are engineered to meet strict safety standards and regulations, ensuring that in the event of a fire, they can effectively contain flames and smoke, granting valuable time for evacuation and reducing property damage.

Despite their impressive fire resistance capabilities, Oversized Fire Doors are also available in a variety of designs and finishes, allowing them to seamlessly integrate with the aesthetics of the surrounding space. These doors offer both style and safety, making them an excellent choice for projects that demand large fire-resistant openings without compromising on design.

TWO HOUR FIRE RATED DOOR

MOLICC 2-hour fire rated doors are engineered to withstand fire for an extended period, providing invaluable protection to occupants and assets. Constructed with a core of mineral wool & fire board encased in durable steel, our doors offer exceptional fire resistance. Equipped with intumescent seals, they expand when exposed to heat, effectively sealing off gaps and preventing the spread of flames and smoke.

Our doors undergo rigorous testing and certification to ensure compliance with Malaysian building codes and safety standards, providing peace of mind to building owners and occupants. Delaying the spread of fire and smoke, our 2-hour fire rated doors facilitate safer evacuation routes and enable emergency responders to contain fires effectively. They also help minimize property damage, protecting valuable assets and infrastructure. Meeting or exceeding regulatory requirements, our doors ensure compliance with Malaysian building codes, safeguarding against legal liabilities.

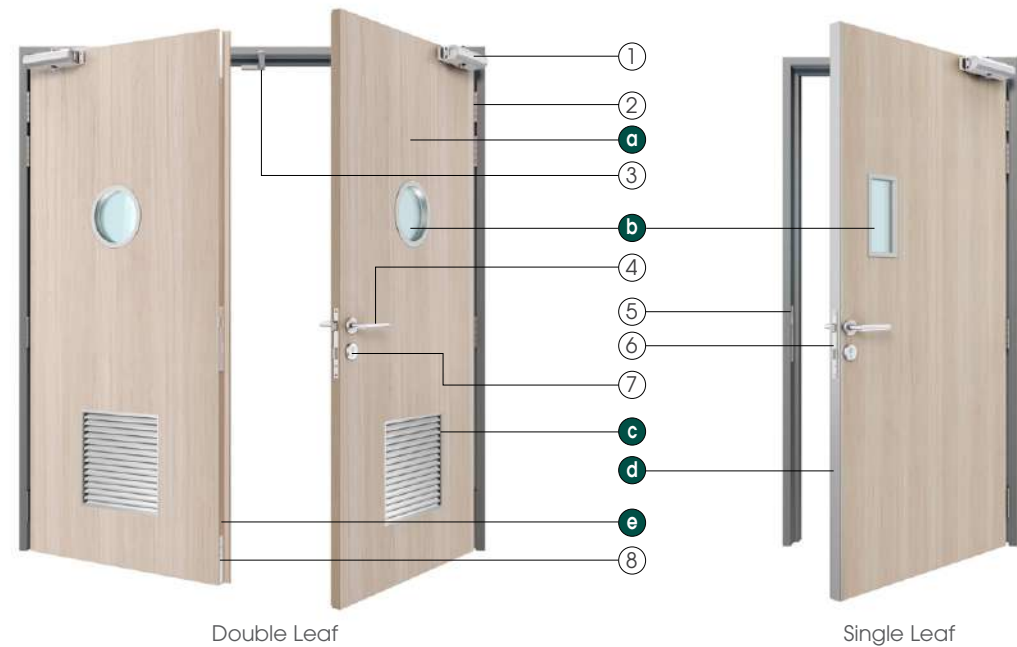

With a proven track record of reliability and effectiveness, our doors offer peace of mind to building occupants, tenants, and owners, fostering a sense of security and well-being. Here is some of specific locations within buildings where 2-hour fire rated doors are commonly installed: electrical riser room, mechanical room, IT room, factory & data center.

TWO HOUR FIRE RATED DOOR - 3 METER

The introduction of the largest Fire Rated Door in Malaysia marks a significant milestone in fire safety. These doors are meticulously designed and rigorously tested to withstand intense flames and smoke for an extended two-hour period. They are essential for structures with wide openings, such as industrial facilities, commercial buildings, data centres, and TNB substations, where both size and extended fire protection are critical for safe evacuations and property protection.

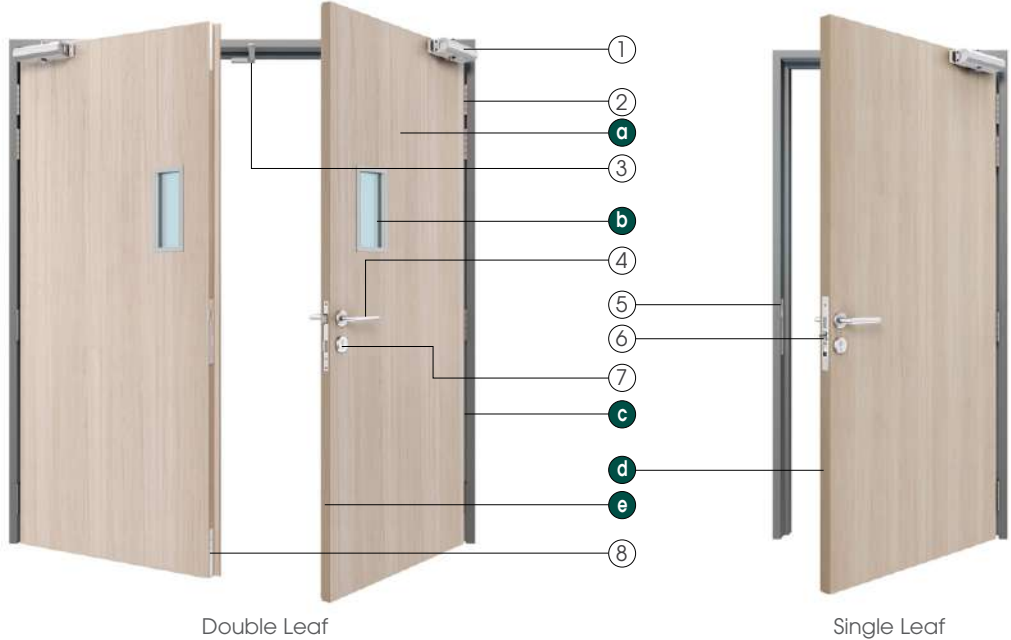

These doors go beyond being a safety feature; they symbolize a deep commitment to safety and unwavering compliance with Malaysia's strict regulations. They offer invaluable reassurance that in the event of a fire, both lives and property are thoroughly safeguarded.

HOW TO MEASURE DOOR & DOOR FRAME

How to measure a Door

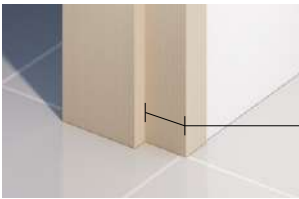

If you going to replace a new door to the existing door frame, it's just an easy process, just measure the existing door thickness, width and height.

Door Width

1. Measure inner frame size (Hinges part)
2. Measure Top, Middle & Bottom size.
3. Pick the smallest value.

Door Height

1. Make sure floor tiles completed
2. Measure inner frame size (Hinges part)
3. Measure Top, Middle & Bottom size.
4. Pick the smallest value.

Door Thickness

1. Measure inner frame size (Hinges part)
2. Measure rebated part size.

Rebated part.

INNER FRAME (Top View)

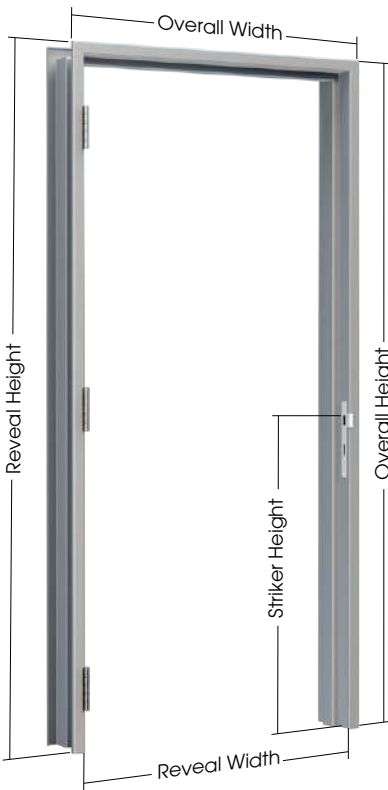

1. Door always measure inner frame

How to measure a Door Frame

If you newly brought a door frame and you just need a door, you might refer the process below to get an accurate measurement of your door frame.

Door Frame

1. Overall size is the outside measurement of the frame.
2. Reveal size is the actual opening inside the frame that the doors will sit in.

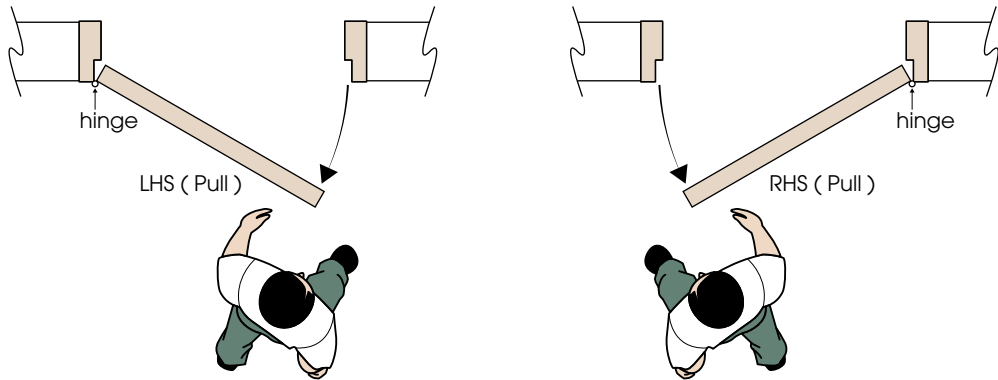

METAL DOOR FRAME PROFILE

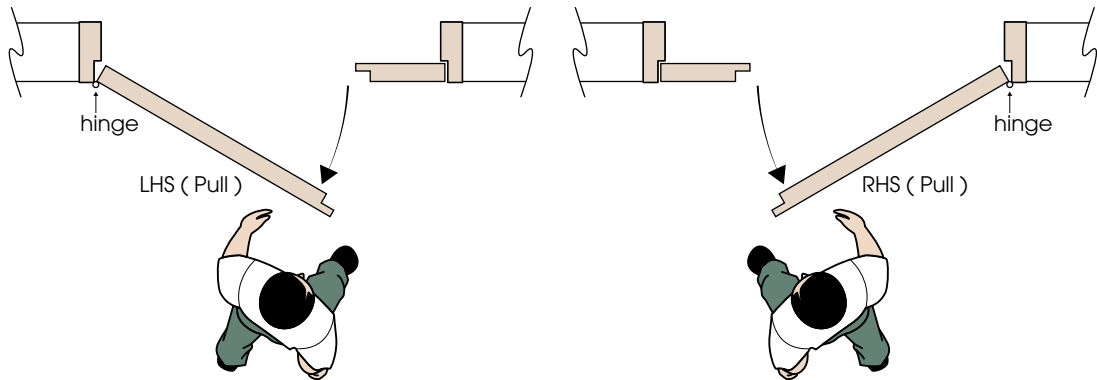

Special Profile Double Rebated	Special Profile Double Rebated	Standard Profile Double Rebated	Special Profile Single Rebated	Standard Profile Single Rebated
