Double Leaf Fire Rated Steel Door

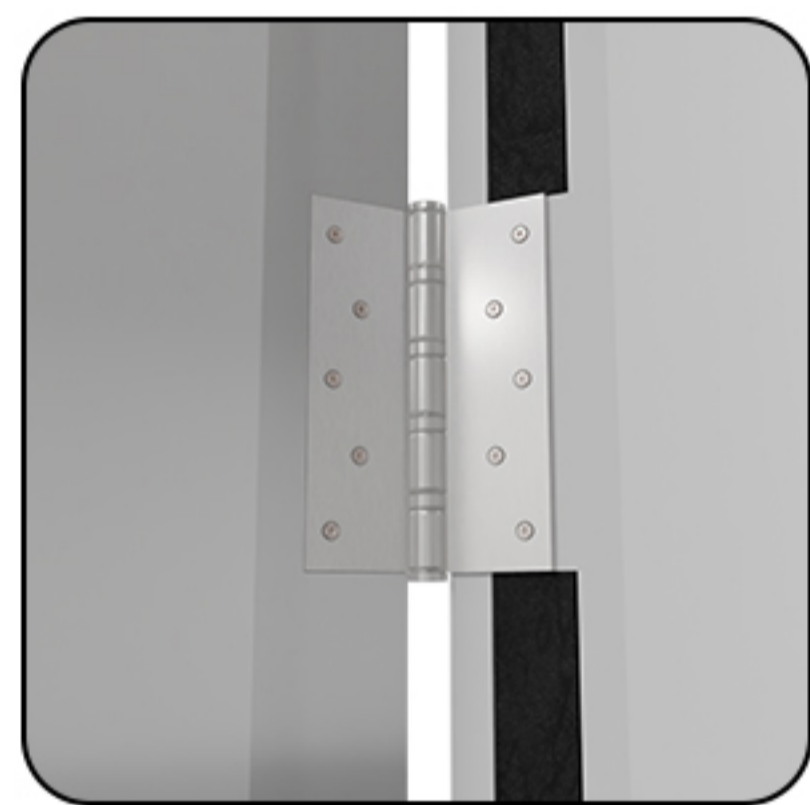

two hinged panels or leaves that open simultaneously, providing a wider entryway and often used in spaces requiring large openings, such as entrances or conference rooms.

Door Closer

A mechanical device that automatically closes a door after it has been opened, ensuring it shuts securely and quietly.

Door Hinge

A mechanical device that allows a door to pivot open and closed, typically consisting of two interlocking metal plates, providing support and enabling smooth movement.

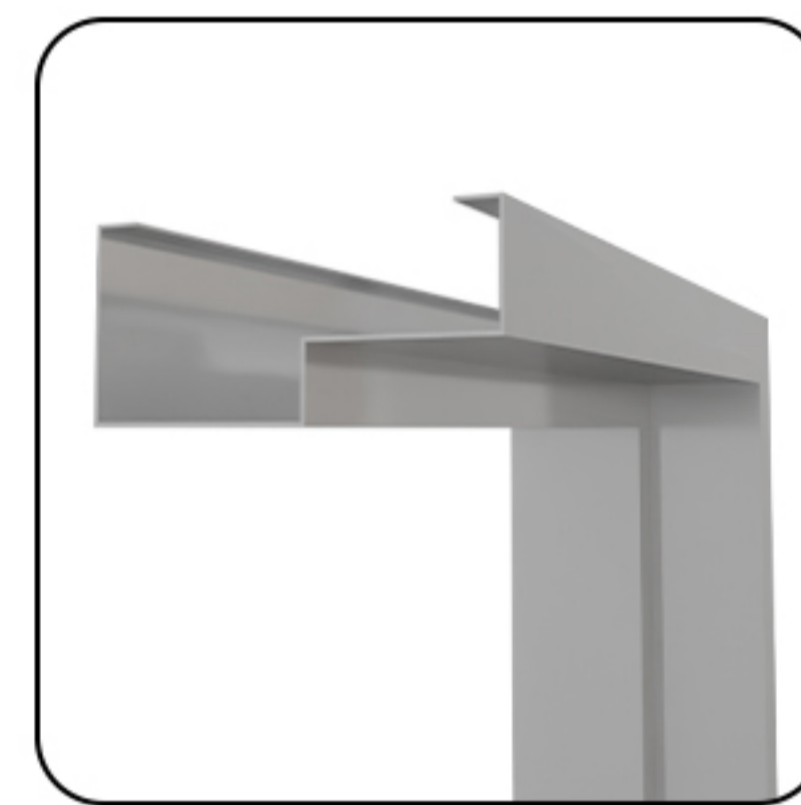

Perimeter Seal

A weatherproofing strip installed around doors or windows to prevent drafts, water, and dust from entering a building, improving energy efficiency and comfort.

Panic Exit

A safety feature designed to allow quick and easy exit from a building during an emergency, typically equipped with a push bar or lever that opens the door without the need for a key or handle.

Door Frame

Specialized frame designed to support a fire-rated door that can withstand high temperatures and prevent the spread of fire and smoke for a specific duration, ensuring safety and compliance with building codes.

Vision Panel

Enhanced safety and security by allowing individuals to visually assess the other side of a door or wall without opening it, improving visibility and communication.
